Bakgrund

Den 14:e september 2011 inträffade en olycka där en hoppare misslyckades att utlösa sin huvudfallskärm och utlöste manuellt reservfallskärmen, dock för lågt för att rädda livet på hopparen.

Hopparen var utrustad med en räddningsutlösare av typen Advanced Aerospace Designs (AAD) Vigil som vid efterföljande utredning visats ha aktiverats. Loopen var dock oskadd och vid en närmare undersökning visade sig att kniven saknas i cuttern.

Tillverkaren av cuttern har bekräftat att kniven ej har installerats i det aktuella fallet. Det verkar som att detta fel endast påverkar en batch av 299 cutters tillverkade i oktober 2007 (kniven saknas dock ej i samtliga 299 cutters från aktuell batch).

AAD har tagit fram en testmetod för att kontrollera att kniven är monterad. Metoden finns beskriven i bifogad servicebulletin. Denna kontroll skall utföras på samtliga enheter av aktuell typ. Dessutom skall alla cutters från ovan nämnda batch bytas ut.

Omfattning

Samtliga räddningsutlösare av typen Advanced Aerospace Designs Vigil (I & II).

Åtgärd

- 1. Samtliga enheter av aktuell typ kontrolleras enligt bifogad servicebulletin.
- 2. Cutters tillverkade under oktober 2007 skall skickas in till AAD för utbyte. Observera att tillverkningsdatumet på cuttern inte nödvändigtvis överensstämmer med tillverkningsdatumet på huvudenheten. Lista på serienummer med cutters tillverkad under oktober 2007 återfinns i bifogad servcebulletin. Dock gäller att samtliga enheter skall kontrolleras enligt punkt ett ovan.

Efter åtgärd enligt ovan markeras fallskärmsjournal med "MV-11-3", datum, signatur samt k-nummer.

EMERGENCY PRODUCT SERVICE BULLETIN (Supersedes Product Service Bulletin PSB-7)

Issue Date : October 20, 2011

Bulletin Number: PSB-8

Subject : Vigil Cutters

<u>Compliance</u>: Mandatory

Identification:

Vigil AAD, All Cutters produced in October 2007

Part Number: 9582006

Date of Manufacture: 10-07 (mm-yy)

(See Photo 1.)

Background:

This SB-8 revises SB-7 to include additional serial numbers (see list B) and to add additional guidance for compliance requirements.

The following incident occurred on the 14th September 2011 at the Saint-Jean Chrysostome (Canada) drop zone:

A skydiver failed to deploy his main canopy and manually pulled his reserve handle with insufficient altitude to fully deploy the reserve canopy. During the investigation of the incident it was discovered that the loop was neither cut nor trapped by the cutter.

Compliance:

In the preliminary report prepared by the Royal Military Academy, it was stated that the knife blade was missing. (See the separate Royal Military Academy report.)

Vigil R&D has confirmed that the electronics worked correctly and fired the cutter, but because of the absence of the knife blade, the closing loop could not be cut.

The manufacturer of the cutter assembly has confirmed that the failure to install the knife blade was caused by error during the cutter assembly process. This appears to be an isolated batch. We are not aware of any similar assembly failure in any other batch of cutters which the cutter assembly manufacturer has produced for any of their other customers, including NASA and the US Armed Forces.

A group of 15 cutters from that batch have been activated by the Royal Military Academy for test purposes, and all worked to according to specifications. (See the separate Royal Military Academy report.)

The cutter was part of a production batch of 299 pieces, produced in October 2007. (See Photo 1.) In the interest of safety, AAD has decided to recall all cutters from the October 2007 cutter batch and to replace all of those cutters free of charge. The removed cutter must be returned to AAD sa/nv or Vigil USA, LLC once the replacement cutter has been received. (Please contact AAD sa/nv or Vigil USA, LLC for return information and instructions.) This will enable us to personally examine and analyze as many cutters as possible from this batch in order to verify that this, in fact, has been an isolated incident.

Photo 1

DOM: October 2007

Even though the production batch only included 299 pieces, Vigil has identified additional Vigil serial numbers (see list B), from those stated in PSB-7 (see list A), on which the affected cutters might have been installed and has included the additional Vigil serial numbers in this PSB-8. The list provided in this PSB-8 replaces the previous list and must be used for reference, however it is essential that any cutter with a Date of Manufacture ("DOM") of 10-07 be replaced, regardless of whether or not the Vigil serial number is on the list.

Magnet Test Procedure:

In the interest of additional safety, we have devised a field test, which can be performed on any Vigil cutter, using a magnet to confirm the presence or lack of a knife blade. It can be done using any magnet on any cutter. Either a small (see Photo 2A) or a larger (see Photo 2B) magnet may be used. You must ensure that the magnet is placed directly below the closing loop hole portion of the cutter, as shown in Photos 2A and 2B. If there is a knife blade present, the magnet will be attracted to the knife blade. If you require a magnet they are available on request from AAD sa/nv or Vigil USA, LLC.

Photo 2 Magnet Test Procedure

Note: All Cutters manufactured from June 2008 have been x-rayed as part of our quality control process, and we have confirmed that the knife blade is present, however for additional safety, we highly recommend that the magnet test be performed on each cutter manufactured prior to June 2008.

Once compliance with this bulletin has been met, and, if necessary, the 10-07 cutter has been replaced, or a cutter with a manufacture date prior to 06-08 has been tested with a magnet and it has been determined that a cutter is present, or it has been determined that the cutter DOM is 06-08 or later, the reserve parachute packing data card should be marked with "Vigil SB-8 - OK."

Compliance Date:

Because of the seriousness of this matter, this Emergency Product Service Bulletin <u>must</u> be complied with before the next jump on all Vigils with the following serial numbers (See List A and B below, which identifies the affected Vigils by the original gold Q.C. hologram numbers.) Please note that this list is not exhaustive since some cutters may have been removed from the original Vigil for which they were provided and may have been used, without our knowledge, as replacements on other Vigils. Some cutters may have a silver hologram because they were issued for stock or as replacements via our dealers. Therefore, verification of the Date of Manufacture ("DOM") of the cutter must be performed at the time of the next reserve repack. Every cutter found with a DOM of 10-07 (see Photo 1) <u>must</u> be replaced before the next jump, and the cutter which was removed must be returned to Vigil. (Please contact AAD sa/nv or Vigil USA, LLC for return information and instructions.)

List A: Serial numbers of Vigils with cutters manufactured in 10/07
